

Bid No. 16-22
Town of Groton, Connecticut 06340

Mobile Data Terminals

2/2/2016

2:30 PM

	Advanced Electronic Design	Holzberg Communications, Inc.	Haywood Associates Inc, dba TransCOR Information Technologies
Unit cost to the Town of Groton for five (5) mobile data terminals	4,794.80	6,349.89	4,984.26
			Please note that the TransCOR proposal is for a Panasonic Toughpad G1. The display on this model is 10.1" versus the requested 12.1". The advantage of the Toughpad G1 is that it is easily removable which creates more versatility for the users. The vehicle lockable docking station will provide excellent security if the Toughpad is to stay within the vehicle during use.
			TransCOR is taking exception to the following request: "Must be from the 12VDC vehicle power and have a built-in charge guard device, eliminating the need for any external power adapter or external charge guard device." TransCOR recommends an external power supply and a separate shut down timer. Having these pieces outside of the MDT allows for a component to be repaired or swapped out without having to replace the entire MDT system. The TransCOR system is designed to decrease downtime and increase flexibility.
